### **SAMPLE ONE**

A quick piece to highlight upcoming products and how they are setting trends in the semiconductor industry. I wrote and edited the piece and used a subject matter expert to verify that the information was technically accurate. This article was written to align with MPS standards, which were created by myself and another technical writer when we both began working at MPS.

### **SAMPLE TWO**

For this piece, I worked directly with two engineers. They laid out the general concepts, the equations, and basic technical information. My role included editing their content, elaborating on sections that I thought required additional details, and refining the article to adopt the MPS voice.

### **SAMPLE THREE**

For this social media post, I interviewed an engineer and turned a technical conversation into a simple social media post that highlighted how MPS solutions are solving customer's problems. Unfortunately, LinkedIn has archived most of these posts (this is the only one readily accessible now), so please reach out to see more.

### **SAMPLE FOUR**

This was strictly an editing piece that checked for grammar, formatting, and required working with a subject matter expert to further understand the part, and how we could convey any unclear phrasing.

### **SAMPLE FIVE**

Another example of a social media post. I edited this article and created a snippy description to encourage followers to check out our website.
